

WORLD AGRICULTURAL PRODUCTION AND TRADE

Statistical Report

AUGUST 1975

WORLD SUMMARIES

Production:

- 1. World Fishmeal and Oil Production and Exports Continue Recovery**
- 10. World Production of Sunflowerseed To Remain Unchanged in 1975-76**
- 14. World Production and Exports of Copra Coconut Oil Expected To Rise in 1975**
- 19. World Production of Lard and Tallow Increased in 1974 over 1973 Totals**

FOREIGN AGRICULTURAL SERVICE U.S. DEPARTMENT OF AGRICULTURE

FOREIGN AGRICULTURE CIRCULARS

Cotton

Prospective 1975/76 World Cotton Crop To Decline Sharply From 1974/75 Level (FC 11-75)

Cumulative August-May Cotton Exports Continue Below Year-Earlier Level (FC 12-75)

Dairy, Livestock and Poultry

Value of April Livestock Exports Was Greater Than Import Value (FLM-MT 6-75)

Value of Livestock Exports In May Continued to Exceed Import Value (FLM MT 7-75)

Fruits, Nuts and Vegetables

U.S. Canned Fruit and Vegetable Exports Higher Than 1965-69 Average in 1974 (FCAN 4-75)

Grains

World Grain Situation: Outlook for 1975/76 (FG 8-75)

Report on USSR Winter Wheat - 1975 (FG 9-75)

Oilseeds and Products

World Palm Oil Production and Exports Continue Uptrend in 1975

Sugar and Tropical Products

World Coffee Harvest in 1975/76 to be Smaller Than 1974/75 Crop (FCOF 3-75)

WORLD FISHMEAL AND OIL PRODUCTION AND EXPORTS CONTINUE RECOVERY

World fishmeal production in 1975 is forecast at 4.49 million metric tons, up 190,000 tons from the 1974 volume. The six major producer-exporters—Peru, Norway, South Africa, Chile, Denmark, and Iceland—are expected to produce 2.3 million tons this year (up 185,000 tons from last year), accounting for 51 percent of the world total. Between 1965 and 1971, these countries represented an average of 64 percent of the world total. The decline is largely attributable to a lower Peruvian anchovy catch, caused by a decline in anchovy population that resulted mainly from a temporary change in the Peruvian current. However, the Peruvian fish catch situation has since improved.

Peru is the principal producer of fishmeal among these six countries. The total fish catch for 1975 is forecast at 5 million tons, the highest since 1971. Assuming a 22 percent meal extraction rate, 1975 fishmeal production is forecast at 1.1 million tons. With an estimated stock carryover from 1974 of nearly 220,000 tons, the total supply for 1975 will approximate 1.32 million tons.

The Peruvian fish catch through mid-June totaled 2.95 million tons, which is equivalent to 650,000 tons of fishmeal. Peru has suspended commercial anchovy fishing until September or October.

Norway's fishmeal production is expected to decline to 280,000 tons in 1975, 9 percent below that of 1974, and 21 percent below that of 1973. With international catch restrictions now in effect for capelin (a member of the smelt family) and North Sea herring and national regulations also applied, it is likely that Norway's fishmeal production will continue to decline.

South African production (including South West Africa) in 1975 is forecast at 290,000 tons, the same as last year.

Chilean output of fishmeal rose to 200,000 tons this year, 14 percent above 1974 production. Chile's record year was 1971, when 263,000 tons were produced. Chile's 1973 output at only 73,000 tons was the lowest since 1961.

Denmark's production of fishmeal in 1975 is forecast at 330,000 tons, the same as in 1974 but 35 percent above that of 1973. Even though Denmark's production has been increasing, in the long run it will probably face the problem of limited-catch provisions, as does Norway.

Iceland's fishmeal production for 1975 is forecast at 100,000 tons, slightly below 1974's level but the same as in 1973. A recent development in the Icelandic fishmeal industry has been the diversion of some capelin from processing for fishmeal to the frozen fish export market to Japan for human consumption.

Countries other than the six major producer-exporters are forecast to produce 2.19 million tons in 1975—almost the same as last year.

In 1976, world fishmeal production is projected to reach 4.75 million tons—260,000 tons above the 1975 forecast. Peru represents 85 percent of this increase, with its 1976 production projected at 1.32 million tons. It is possible that

Peru's production could even be higher, but this will depend on the price of fishmeal vs. costs of production. Including projected stocks of 200,000 tons, Peru's 1976 supply could total 1.52 million tons.

World exports of fishmeal in 1975 are forecast at 2.28 million tons—390,000 tons above 1974's exports. Peru represents 94 percent of this increase, with its 1975 exports forecast at 1 million tons—almost 370,000 tons above those of 1974 and 650,000 tons above those of 1973. In 1976, world exports are projected to reach 2.48 million tons—200,000 tons above 1975's forecast. Peru will represent all of the increase in this trade, with its 1976 exports projected at 1.2 million tons.

Several of the major importers of fishmeal also export the product. West Germany, for example, imported 352,000 tons of fishmeal in 1974 and exported 92,000 tons. France imported 37,000 tons that year and exported 16,000 tons. Japan imported 25,000 tons and exported 31,000 tons. Japan is also a producer of fishmeal.

Fish Oil Output and Trade Up

World production of fish oil in 1975 is forecast at 1.1 million metric tons, representing an increase of 11 percent or 127,000 tons above 1974's output. The five principal producer-exporters—Peru, Norway, United States, South Africa, and Iceland—are forecast to produce 61 percent of the total 1975 fish oil output and all of the increase from the previous year.

Peru in 1975 is the largest fish oil producer, with output forecast at 325,000 tons—113,000 tons above that of last year. This year's assumed oil extraction rate is between 6 and 6.5 percent—the highest on record. Stocks on January 1, 1975, totaled 75,000 tons. Thus the total 1975 supply is 400,000 tons, compared with 221,000 tons in 1974.

Norway's 1975 production is forecast at 143,000 tons—14,000 tons below 1974's output and 49,000 tons below 1973's output. Lower quotas for capelin are partly responsible for this decline.

Fish oil production in the United States for 1975 is forecast at 108,000 tons, the same as last year.

South African fish oil production in 1975 is forecast at 60,000 tons—18 percent above that of last year. This is the highest production since 1970.

Icelandic production of fish oil for 1975 is forecast at 30,000 tons, which is approximately the same as in the previous 2 years and the highest since 1967.

Production in the countries other than the major producer-exporters for 1975 will be slightly above 1974's output. Their total production for 1975 is forecast at 451,000 tons—16,000 tons below that of last year.

World production of fish oil in 1976 is projected at 1.16 million tons—only 40,000 tons above 1975's forecast, with Peru again supplying most of the increase. Peru's 1976 fish

oil production is projected at 350,000 tons—25,000 tons above 1975's forecast.

World exports of fish oil in 1975 are forecast to total 620,000 tons, up 26 percent or 129,000 tons from the low level of 491,000 tons in 1974. The increase largely reflects recovery in Peruvian exports to 175,000 tons—almost 100,000 tons above last year's exports. Fish oil exports in 1974 were the lowest since 1965. Norway's 1975 net exports are forecast at 100,000—18,000 tons above those of last year. Together, Peru and Norway account for 91 percent of the increase in world exports of fish oil for 1975. In 1976, world exports are projected to increase to 695,000

tons—75,000 tons above 1975's forecast. Peru will account for all of the increase in 1976 world exports. Peru's exports for 1976 are projected at 250,000 tons.

The major importer of fish oil is the United Kingdom, whose 1974 imports totaled 154,000 tons. Previously, this country imported as much as 265,000 tons. The United Kingdom also exports fish oil, but in very small quantities (7,000-9,000 tons). The next largest importer is West Germany, which imported 133,000 tons in 1974. Norway is a major producer-exporter, but also is a major importer. In 1974 Norway exported 129,000 tons, while importing 47,000 tons.

WORLD PRODUCTION OF SUNFLOWERSEED TO REMAIN UNCHANGED IN 1975/76

World production of sunflowerseed in 1975/76 is projected at 10.8 million metric tons, practically unchanged from 1974/75. Outturn in the USSR is expected to be below 1974's 6.8 million ton crop, possibly as low as 5.8 million tons. Expected increases in production in the United States, Spain, and Eastern Europe—especially Yugoslavia—and a projected recovery of production in Argentina in early 1976 following this year's poor harvest should offset a major portion of the expected decline in the USSR.

If the Soviet crop is in the middle of the current range of estimates i.e., 6.3 million tons—world production of sunflowerseed oil in 1976 is expected to remain at approximately 4 million tons, unchanged from that of 1975. A 500,000-ton decline in gross sunflowerseed production in the USSR represents a potential 175,000-200,000 ton decline in oil output during 1976. Sunflowerseed production on an oil basis is expected to increase in Eastern Europe by 60,000 tons, in the United States by almost 60,000 tons, in Spain by 30,000 tons, and next year in Argentina by 50,000 tons.

World production of sunflowerseed meal in 1976 is expected to remain at approximately 3.8 million tons, or the protein fraction of about 130 million bushels of soybeans.

World exports of sunflowerseed and oil, oil basis, in 1976 are forecast at 645,000 tons, down from an estimated 690,000 tons shipped during 1975. The projected downturn in exports primarily reflects an expected decline in Soviet exports in both 1975 and 1976 resulting from smaller harvests since 1973's record 7.4 million-ton sunflowerseed crop.

World exports of sunflowerseed and meal, meal basis, in 1975 are expected to decline 18 percent to approximately 415,000 tons, the lowest volume traded since 1964. With the exception of the United States, exports of sunflowerseed for crush from the world's major producer-exporters have trended downward in recent years as a consequence of increased crushing in producing countries. Changes in the volume of meal exported have been more the result of

expected to decline because below normal rainfall has adversely affected yields in major producing regions of the southern RSFSR and Ukraine. Although sunflowers have a reputation for being drought-tolerant because of their extensive root systems, they still require adequate moisture during the early stages of plant growth to attain good yields.

Planting of sunflowers in the USSR took place earlier than usual this year, because dry conditions enabled field work to begin sooner. Unseasonably dry weather since then is believed to have limited root development and head size in many areas. Reports have been received that many sunflowers are now being harvested for silage because of small heads. Consequently, harvested acreage of sunflowerseed for crushing could be much less than last year's, despite the fact that planted acreage may actually have increased slightly.

In Romania, flooding of the Danube in early July is believed to have reduced the sunflowerseed crop by at least 100,000 tons from earlier expectations. Consequently, outturn is expected to increase only slightly to approximately 700,000 tons from last year's drought-reduced 671,000 ton crop.

In Argentina, sunflowerseed production in 1975 was officially estimated at 780,000 tons, the lowest outturn since 1966. Sowings were below normal because of dry conditions, and frequent rains and flooding in Buenos Aires Province during the ripening and harvest stages reduced the crop even more.

Production of sunflowerseed in the United States in 1975 is forecast at a record 450,000 metric tons—up nearly 160,000 tons, or more than 50 percent from 1974's crop of 291,000 tons. Of this year's crop, production for crushing is estimated at 380,000 tons, the balance being confectionary seed. U.S. crush and exports combined in 1975/76 are forecast at 350,000 tons, yielding 140,000 tons of oil. Oil output in 1974/75 was just over 80,000 tons.

This year, plantings increased by about 70 percent to around 1.2 million acres, primarily reflecting the introduction of sunflowers on approximately 275,000 acres in Texas. Flooding and heavy rains early this summer in North Dakota and Minnesota, where most U.S. sunflowerseed is grown, cut production in that region by as much as 50 percent, preventing total U.S. production from keeping pace with planted acreage.

(In percent)

Sept Argentina where harvested in the year indicated. 2/ Partly estimated. 3/ Forecast. 4/ Exports of seed expressed
5/ Estimated at about 50 percent of the total volume of vegetable cake and meal exports which are not separately
less exports of cottonseed meal. Includes small quantities of other cake and meals. 7/ Unofficial data compiled

WORLD PRODUCTION AND EXPORTS OF COPRA, COCONUT OIL EXPECTED TO RISE IN 1975

Production

World production of copra in 1975 is estimated at 3.88 million metric tons, compared with 1974's drought-reduced crop of 3.2 million. This year's production, equivalent to 2.48 million tons of coconut oil, will exceed by 18 percent the 2.10 million tons, oil equivalent of copra, produced in 1974. The increased production is expected primarily from a larger output of copra in the Philippines and Indonesia.

Copra production in the Philippines in 1975 is expected to reach 1.85 million tons, 34 percent higher than last year's 1.38 million. The 1975 estimate is based on improved weather conditions and an increased number of bearing trees. Production in 1974 declined 24 percent from that of the previous year, owing to nearly 2 years of drought and widespread harvesting of immature nuts. Another factor contributing to 1974's reduced official estimate of copra production may have been that some shipments of copra from the southern areas of the country were not recorded.

Indonesia's copra production is estimated at 640,000 tons, an increase of 12 percent from the 570,000 tons of 1974. The gain in 1975 is expected from a slight increase in harvested area, an intensified aerial spraying program to rid the producing areas of pests, and the rehabilitation of drainage systems in the coastal area. Also, a new canal systems, under construction in the tidal areas, is expected to aid the expansion of coconut plantings and improve drainage problems in the producing areas.

Because of the drainage improvement programs in Indonesia and expanded harvested areas in the Philippines, world production of coconut oil in 1976 is forecast to

increase to 2.57 million tons, about 4 percent higher than output in 1975.

Exports

World exports of copra and coconut oil, in terms of oil, are expected to reach 1.23 million tons—up 29 percent from the 950,000 in 1974. Larger exports from the Philippines will account for most of the increase this year.

Copra exports from the Philippines are estimated at 610,000 tons, 97 percent higher than the 309,000 tons that were shipped in 1974. Government policy favoring exports of finished products, rather than copra, was not modified until the last quarter of 1974, when copra exports were allowed to move more freely. Minimum export and farm-gate prices were eliminated, and a flexible pricing system, based on world prices, was used instead. Consequently, the export volume of copra and coconut oil in 1975 is expected to increase substantially from 1974 levels.

Coconut oil exports from the Philippines, are estimated at 485,000 tons in 1975, an increase of about 12 percent from the 432,000 tons shipped last year. As additional coconut processing facilities begin operating, coconut oil exports are expected to increase accordingly, while copra exports decline. The existing copra crushing capacity is 1.6 million tons a year, and there are at present applications for the establishment of coconut oil mills with a total crushing capacity of about 1 million tons.

World exports of copra and coconut oil are expected to total about 1.28 million tons, oil basis, in 1976, with over 70 percent of the total emanating from the Philippines.

^{1/} Preliminary; partly estimated. ^{2/} Excess of imported from the Philippines and Indonesia over recorded exports after allowances were made afloat and for diversion enroute. ^{3/} Net exports. ^{4/} Believed to include a substantial volume of unregistered imports from Indonesia.

Foreign Agriculture Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of U.S. Agriculture Attaches and Foreign Service Officers, results of office research, and related information.

WORLD PRODUCTION OF LARD AND TALLOW INCREASED IN 1974 OVER 1973 TOTALS

World lard production. World lard production increased 6.3 percent in 1974 to 3.96 million tons because of increased hog slaughter and higher yields per carcass in the major producing countries. Four areas in the world—the United States, the Soviet Union, the European Community (EC), and the Socialist East European countries—accounted for over four-fifths of world production.

U.S. production totaled 620,000 tons in 1974—an increase of nearly 9 percent over 1973's and the first gain in U.S. lard output since 1971. Increased slaughter accounted for most of the upswing, although yields also gained slightly. Soviet production reached 931,500 tons—up 5.5 percent over 1973's—but short of the 1972 record of 939,300 tons. EC production was up 6.5 percent, boosted by a 4.75 percent gain in yields. East European lard production was up nearly 10 percent to 951 thousand tons. Poland—the largest East European lard producer—also reported higher yields.

Sharply higher prices were the major stimulus for higher lard yields in 1974. For example, the average U.S. export price for lard was 25 cents per pound—up nearly 50 percent over the 1973 price. Prices in the first quarter of 1975 were about 4.8 cents higher than 1974 levels. Despite this

high price, world lard production is forecast to be down slightly in 1975 because prices of vegetable oil substitutes are expected to be more competitive.

World Tallow and Grease Production. World tallow production increased 11 percent during 1974 to a record 4.9 million tons. U.S. production was up 17.3 percent to 2.8 million tons. EC production was up 16 percent to 729,000 tons, reflecting more normal cattle slaughter rates. Production was up 13.6 percent in the USSR and up slightly in Canada. Australia was the only major producer to show a decline—down 20 percent—the result of sharply lower cattle slaughter.

For 1975, world beef production is expected to increase about 6 percent; however, world tallow production will probably be below 1974 levels because of lower slaughter weights. Recent slaughter statistics underscore this forecast: Average U.S. slaughter weights for the first half of 1975 are running 40 pounds per head below those of the same period a year ago; slaughter weights in France were down 30 pounds in May.

Hog grease production is included in U.S. tallow statistics, but not in those of other countries.
